2010
Annual report
“The most hopeful sign of a community is knowing to join together and build, and thus build that which is of interest and look to the future.”

José María Arizmendiarieta (1915-1976)

About MONDRAGON

The MONDRAGON Corporation is a result of the co-operative movement which began in 1956, the year in which the first industrial co-operative was created in the Guipuzcoan town of MONDRAGON; its company philosophy is reflected in its Corporate Values.

- Co-operation.
- Participation.
- Social responsibility.
- Innovation.

MONDRAGON is a socio-economic reality created through the combined efforts of all our employees. It is an attractive alternative supported by a socially responsible and successful system of employee participation. Free adhesion, economic organisation, the sovereignty of work, intercooperation, social transformation and education are the principles on which the daily work at MONDRAGON are based.

It is organised into four areas: Finance, Industry, Retail and Knowledge, and nowadays it is the largest business group in the Basque Country and the tenth largest in Spain with about 84,000 people sharing a business idea.
President’s message

2010 can be considered a satisfactory financial year for MONDRAGON. The companies making up the Corporation have all made a great effort, which has been paid off in the form of overall results that are an improvement on last year’s.

Without a doubt, to a large extent this positive performance has been made possible by the guidelines and lines of action put into practice in 2009. The results of a series of financial, economic and business measures taken by the cooperatives have been made patent throughout 2010. The success of these measures, together with the greater presence of the cooperatives on the international markets and our firm commitment to innovation have enabled us to improve our companies’ competitive capacity and end 2010 with an advance in total sales and a significant increase in MONDRAGON’s profit.

Evolution in the different areas of the Corporation has been as follows: in Finance, the MONDRAGON companies ended the financial year on a successful note thanks to their measures for improving the companies’ efficiency, despite the tough scenario affecting the sector; the Retail area made significant progress in reducing its bank debt, improved its internal efficiency and has placed its stakes in a strategy based on “the most competitive price” for its clients, all in a year characterised by low consumption; the Knowledge area continued to progress with the MONDRAGON Health project and advance in the creation of inter-cooperation platforms for promoting new business projects; and in the Industry area our increased presence on international markets has enabled business to improve while enabling employment to be created in industry. We would also stress that international sales have increased 13.3% with respect to last year, with international sales now representing 63% of the total and our business presence becoming consolidated on the European markets and those of emerging countries such as Brazil, China, Russia and India.

This will be the trend over the forthcoming years: a firm commitment to reinforcing MONDRAGON’s international business as a sine qua non condition for developing sustainable long-term business projects.

This will also be done through innovation, which is our corporate trademark and at the core of the Corporation’s development. We have strengthened this commitment in 2010 by earmarking major resources and teams of people to it. Fully immersed in the information and knowledge society, in a globalised world that is undergoing rapid change, the agents involved in innovation and knowledge continue to be the key factor for the evolution of business projects. Mondragon University, the technology centre network and the cooperatives’ R+D units are all set to make an additional effort to prove that MONDRAGON’s innovative attitude is the best guarantee for the future.

This all takes place within the framework of a cooperative model, whereby we share our Principles, Values and Management Model and trust in the strengths of the group to continue to grow, making a reality of the corporate commitment by generating wealth and employment.

José Mª Aldecoa
Recognition for Excellence in Management
Data to December 31 2010

1 Finalist in the European EFQM Award obtained by Fagor Electrodomésticos (Cookers).

1 European Environmental Award achieved by Orkli.

8 Q de Oro Gold Award: Caja Laboral, Copreci, Fagor Industrial, Fagor Minidomésticos, Eroski Fresh Products Platform in Amorebieta, MONDRAGON Lingua, Politeknika Txorierri Ikastetxea and Seguros Lagun Aro.

106 ISO 9000 Certifications.

54 Environmental ISO 14001 Certifications.

24 OHSAS 18000 Certifications for Occupational Health and Safety Systems.

6 Ecodesign Certifications.

1 SA 8000 Social Responsibility certificate obtained by Eroski.

1 Family-Friendly Company (EFR) certificate obtained by LKS.

The 2010 financial year has been difficult for the financial sector, with a number of adverse factors coming together such as the persistence of historically low interest rates, the continuing high levels of default and the resulting need for provisions that have continued to take their toll on profit and loss accounts, and the fierce competition to capture savings, with an increase in financial costs and pressure on margins.

To all of this one must add two further specific circumstances, namely the restructuring of the sector, particularly in the savings banks segment which is undergoing an intensive concentration process, and the increase in the demand for capital in order to reinforce the solvency of the financial entities.

The MONDRAGON Finance Area has been required to cope with this difficult environment, having to counteract the unfavourable factors with management measures aimed at improving the efficiency of the businesses in this area.

The most representative figures for banking activity, such as credit investment and the capture of deposits, have shown a pretty unimpressive trend, in keeping with the slow pace of the economy which has been reflected in a reduction in household and business income, with the resulting adverse effect on the capacity for saving and the demand for credit worthiness.

In terms of the stock markets and their effect on the investment portfolios of the organisations in this Area, their evolution over the past year has been uneven, since in the USA and Central European countries they have performed well, in terms of both fixed and variable income, while in the peripheral European countries, including Spain, there have been price reductions due to the increase in country risk.

In this context, the net returns obtained have not only allowed the actuarial requirements for the companies in this Area, which have technical provisions to meet their long term obligations, to be met but have
also allowed them to reinforce their assets, improving their solvency.

In terms of insurance activities, the sales networks have continued to be reinforced, and there has been an increase in its presence in the modern phenomenon known as “social networks”. So new options have been introduced to continue advancing with its strategic objective of continuing to grow in a profitable and sustained manner.

Caja Laboral
In a financial year such as the one experienced in 2010, characterised by a serious economic and financial crisis, Caja Laboral has responded strongly to the challenges thrown at it and has come out even stronger in terms of its already outstanding solvency position, at the same time as maintaining a comfortable liquidity level.

In its balance sheet as of 12.31.2010, total assets stood at €20,998m, with a slight reduction of €213m with respect to the close of the previous financial year, a fall of 1% in relative terms.

Total customer deposits rose to €18,629m at the end of the year, after having grown 0.1% in relative terms. This achievement is even more impressive if one takes into account the liabilities war unleashed in the sector, which Caja Laboral has been able to avoid reasonably well thanks to its comfortable liquidity situation.

The growth of customer deposits has been sustained in savings accounts, which have grown by 3.5%, at the expense of current accounts, and also in fixed term deposits which have increased by €55m. Similarly, the issues of an institutional nature through covered bonds have contributed to the growth of €400m.

Credit investment, excluding the valuation adjustments that mainly include the amounts constituted for hedges, stood at €16,486m at the end of the year, which is a 2% reduction with respect to 2009. There were slight contractions in both the business and the individual segments, owing in this last case to the slow down of the property market and the resulting reduction in the demand for mortgages.

The weakening in economic activity and employment was reflected in an increase in the delinquency rate, which stood at 3.17%, a manageable level and one which compares favourably with the sector average.

Equity was quantified at the close of the financial year at €1,573m, which means that the solvency coefficient is 12.2%, one of the highest in the financial sector.

In terms of economic growth, the past financial year has been particularly complicated in terms of profitability, since new investments have materialised at prices which are lower than those of the maturing investments, while the pressure on the cost of liabilities intensified in an environment of low liquidity and maximum competition to capture the money of savers. This has all affected the interest rate margin, with the effect being partly offset through internal cost containment measures, which has made it possible to obtain profits before allocations of €188m.
Nonetheless, the notable scale of the allocations to provisions is what has determined the final Net Profit, which was €51.4m.

The efficiency ratio, which is the relationship between operating costs and income obtained by the company, has suffered in 2010 from the low interest rates, which are at historic lows. Despite that, the ratio is around 43.9%, which can be considered a good level and compares favourably with that of other savings banks.

In the international arena, Caja Laboral carried out overseas operations, supported by a network of more than 1,000 correspondent banks across the world, which in 2010 accounted for more than €2,700m of business related to international transactions.

**Lagun-Aro, EPSV**

The members of the Lagun-Aro Group are generally the partners in the co-operatives that make up MONDRAGON. Lagun-Aro focuses its activity on the social protection of this group of people and of their beneficiary family members, with a scope similar to that of the Public System.

As of December 31, 2010, this group of active members stood at 29,973 people, integrated into 146 co-operatives, with an annual net decrease of 2.5%.

The amount of benefits to be paid, which covers the short-term benefits, stood at €77.1m in 2010, and can be broken down into:

- Temporary incapacity, €37.9m (49% of the total).
- Employment support, €18.0m (23% of the total).
- Health care, €14.3m (19% of the total).

The money paid out for Temporary Incapacity has increased in 2010 owing to the upward trend in the absenteeism rate, from 5.11% in 2009 to 5.76% over the last year. This has given rise to a deficit of €6.1m during the financial year, which discounting the remainder carried over from 2009 gives a balance for this benefit of -€1.7m.

In terms of the benefit for Employment Support, spending has fallen with respect to the previous year, since the recovery and improvement in the activity of some co-operatives has made it possible to generate employment and carry out relocations, which when combined with other solutions of a definitive nature has allowed it to reduce expenses from effective unemployment and moving calendar. Despite the reduction in this expense, a deficit of €5.9m has been recorded for the financial year, although the benefit continues to have a positive accumulated balance of €48.6m.

The benefits for Retirement, Widowhood and Permanent Disability, whose coverage must be guaranteed over long periods of time and for a significant number of members, are financed through the creation of the opportune provisions which guarantee the corresponding pensions. At the end of the 2010 financial year, the number of pensioners stood at 9,784 people, 558 more than at the close of the 2009 financial year, with the total sum being paid to these people for these items rising to €113.8m, 9.5% more than in the previous year.

These capitalisation benefits are guaranteed through an Asset Fund, which closed the 2010 financial year at €4,478m, once the returns and adjustments to value recorded at the close of the financial year have been applied. The good performance in the stock markets has

</table>
had a very positive impact on the returns on financial investments. Compared to the previous year the Asset Fund has increased by €267m, which is an increase of 6.4%.

Seguros Lagun Aro
The economic situation in 2010 has not prevented Seguros Lagun Aro from continuing to innovate, both in its internal processes and in its relationship with customers.

In terms of its customers, it has made improvements to the “online” branch service, a pioneer in the sector, and has increased its presence in social networks in order to create a closer relationship with the customers and brokers. Internally, and within the framework of the “MONDRAGON en red” (MONDRAGON in the Internet) initiative, it is renewing efforts to create a 2.0 culture in the company.

The commercial development of the company in 2010 has been aimed at taking further steps toward the target of being present across the entire country in the year 2012. Over the past financial year the first brokerage branch in Madrid has opened and the brokerage channel has been reinforced with the creation of three Regional Departments: North (Basque Country, Cantabria, Navarre and La Rioja), West (Asturias and Castile-Leon) and East (Barcelona, Saragossa and Valencia).

In addition to covering the whole of Spain by 2012, another of the strategic objectives is to strengthen the highly valuable relationship the company has with Caja Laboral. To achieve this it has continued jointly sponsoring the Caja Laboral Baskonia and Lagun Aro GBC basketball teams which play in the Liga ACB league, and in 2010 it has also added the team Bizkaia Bilbao Basket. This allows it to reinforce the image of the brand of the two organisations, increasing recognition and improving the business of both.

The commercial efforts made have been rewarded and this is demonstrated by the study carried out by the ICEA at the end of 2010, which places Seguros Lagun Aro among the companies most highly valued by brokers and the top rated company in terms of contact personnel and customer service. Similarly, its Contact Centre was awarded the excellence award, being considered the most functional and welcoming platform of those analysed.

We should also mention the launch, through the Seguros Lagun Aro-Mirada Social Foundation, of a psycho-social service for the victims of traffic accidents and their families. This is a pioneering service in the Basque Country and one which offers all types of support (medical, legal, etc.) to help people overcome the problems caused by accidents. This is a new development in the attention to victims and one of the most important social action projects run by the Seguros Lagun Aro Foundation.

In terms of the financial results, the figures for 2010 are an improvement on those for the previous year. Income has risen to €197m, increasing by 5% in Household insurance, remaining almost unchanged for Car insurance (+0.1%) and falling 4.6% for Life insurance. Pre-tax profits are €10.9m, 5.8% above the figure for the previous financial year. Comparing these with the sector as a whole, the figures have been encouraging, with Seguros Lagun Aro experiencing above average growth in 2010 and the company also recording better results in the accident rate for Car insurance.
Throughout 2010 there has been a slow exit from the recession, although when taken as a whole the financial year has still seen a slight shrinking of the economy with respect to 2009. Internal demand has remained weak throughout the year, with a negative effect on investment and the creation of employment. It has been the overseas sector which has provided a certain level of relief in terms of industrial activity.

The MONDRAGON Industry Area has continued applying measures aimed at adjusting to the situation, and these have been having an effect. In turn, the gradual recovery in the international economy has allowed for the gradual improvement of order books, although at a slow rate. As already mentioned, the performance of overseas markets has been more satisfactory than that of the national market, where the dominant characteristic has been lethargy.

The Industry Area taken together has recorded a total sales figure of €5,711m, which is an increase of 5.4% compared to 2009.

Of this figure, €3,594m has come from international sales, whose growth (13.3% higher than 2009) contrasts notably with the reduction recorded in domestic sales (-5.2%). As a result, the percentage of total sales accounted for by international sales has risen to 62.9%, an increase of 3.5 points compared to 2009.

In terms of overseas expansion, one must highlight the ongoing consolidation in overseas markets, with the opening of new production plants in Germany, Brazil, the USA and India, increasing the number of overseas plants to 77. At the close of the financial year a total of 14,674 people in the MONDRAGON Industry Area were working in factories and offices located in other countries.

The investments made have been recorded at €377m, which represents an increase of 16% over those made...
in 2009. This is the result of the gradual restoration of normality, although the installed production capacity is still a long way from being fully utilised.

A milestone during the last financial year was the introduction of the electric City Car, which combines some of the main innovations that are going to be seen in new products and business areas within the automotive sector.

Similarly, the promotion of new businesses has continued and during 2010 two new companies were launched: Batz Lightweight Technologies, which resulted from the collaboration between Batz and FPK for the manufacture of aerodynamic and structurally light components, and the new co-operative Altsasuko, run by Copreci to complement its range of components. At the same time, other new activities have been launched, for example the Eika supercondensors, waste management by Maier and the products that facilitate the normal development of people with disabilities, produced by Matz-Erreka.

In terms of employment, as the effects of the economic recession have been overcome and industrial activity has increased, employment in this area has been recovering. This has led to an increase in 1,378 jobs in the average personnel employed during the year when compared to the previous financial year, although taking as the basis for the calculation the start and end of the financial year 1,906 jobs have been created.

This improvement in the environment and the strength of the management measures adopted to manage the situation have had a positive impact on profitability in the Industry Area. Its results for the last financial year, before taking into account compensation for capital interest, stood at €170m, which is comfortably double the €71m recorded in 2009.

This improvement would not have been possible without the serious corporate effort put into innovation, and an indication of this is the 1,293 people involved in research across the three centres specialising in different technologies, Mondragon University and the industrial co-operatives, as well as the €144m allocated to R&D in 2010.

In terms of Polo Garaia, the main developments have been the addition of Saiolan, the Business Innovation Centre, and the launch of a Living Lab, promoted by the Basque Country Association of the Home Appliances Industry (ACEDE), which is a research concept centred on the user and open innovation, with the participation of multidisciplinary teams.
area, mention must also be made of the 24 industrial co-operatives that hold the Occupational Health and Safety System certificates in accordance with the OHSAS standard.

Finally, in terms of the social responsibility of the co-operatives, and the concern for the proper conservation of our environment, we can highlight the 54 co-operatives with ISO-14000 certification for environmental quality.

**Consumer Goods**

The Consumer Goods sector of MONDRAGON had a turnover of €1,563m, which is a 0.8% reduction compared to the previous year. International sales accounted for 66% of the total.

Appliances. The principal markets in which it operates continues to have a negative trend: Spain contracted by 4.3%, and accumulated a 45.5% drop in the period, France grew by 0.3%, but receded 7.9% in the period, and Poland dropped by 0.4%, although it accumulated a growth of 29% since that date.

With regards to the behaviour of brands, the market share has reached 18.1% in Spain (Anfel figures), 14.2% in France (source: Gifam) and 8.3% in Poland (source: Ceced). Fagor is the fifth largest European manufacturer in the sector with an estimated market share of 5.1%.

In terms of the development of its business prospects, Fagor will continue working on the adjustment to its activities, entirely necessary in the current environment, will boost its activities in Asia in order to triple the sales in the area in three years (Asia 100 Project) and will activate its policy of alliances to underpin the development of its operations, not just in overseas markets.

Fagor firmly believes that innovation is the key factor on which any future development will be based. As a result, after the opening in mid-2008 of the Fagor Hometek International Research Centre, Fagor invested more than
€69m in 2010 in innovation activities, which places it in eighth place in terms of investment in innovation in the ranking of Spanish Companies, as published in the European Commission report “The 2009 EU Industrial R&D Investment Scoreboard”.

Sustainability is another of the priority action areas for Fagor. This is why it has published the “Sustainability Report 2010” which includes its activities in the area of sustainable commitment for a socially-orientated business group such as ours. Efforts are focussed on the management model, one of the aspects which differentiate us from our competitors, sustainable innovation, people and social transformation and environmental management.

**Confort** also immersed in an adverse juncture, their activities are restricted to the Spanish market, but they look to the future with optimism from the development of alliances.

**The Furniture Group** (Fagor Mueble, Grumal, Danona, Coinma and Gerodan) has been directly hit by the collapse in the property market, recording an accumulated reduction in demand over three years of over 60%.

The synergy projects in the heart of the Furniture Group, such as product standardisation and simplification, the specialisation of industrial plants, joint purchasing, commercial synergies and the reduction in overheads, have been carried out within the timescales established, although they have not proved enough to meet the quantitative targets set. In the short-term its projects involve the continuation of this policy of rationalising activities.

**The Leisure-Sport Group** (including Orbea, Dakar and Eredu) has managed to maintain its turnover figures for its two camping and designer furniture business on the basis of growth in exports, and completed the catalogue with new developments of designers Lluscà and Teixidó. The strategy is focussed on extending and increasing its presence in strategic markets and intensifying its activity in relation to architects and brand image, which along with the optimisation of expenses and costs will allow it to maintain its profit level.

The Health Care area we can highlight international expansion and the efforts made to develop new products.

**Oiarso** has had a year of adjustment of its production structures and international expansion with a growth of 19%, along with the consolidation of its China subsidiary with the incorporation of a new partner, Cardiva at 50%.

**Osatu** has been focussed on the phase of finalising the development of the new range of defibrillators and their certification, along with the Structuring of its partners in strategic countries and the registration of products there.
Capital Assets
The Capital Goods sector turned over 935 million euros, with a contraction of 4.2% compared to last year, and its percentage of the international sales at a 70% of its total.

In Automation and Control the 2010 financial year has meant a recovery for Fagor Automation after a difficult 2009 in the machine tool sector. There has been an outstanding recovery in relevant markets such as Taiwan and Brazil. Chinese demand in this sector has continued to play an important role. The country has confirmed its position as the main market.

In addition, Fagor Automation has continued to innovate in 2010, with product proposals such as CNC 8065 and CNC 8055 power being very well received by the market. It proposals for new high resolution 23 bit encoders, both linear and rotary, are leading to its improved positioning in the main international markets. Similarly, in 2010 there has also been an intensification in positioning in the Indian market.

Mondragon Assembly has continued with its internationalisation strategy in 2010, which supported by its proposals for the new Tabber Lite and the flexibility and speed of its service have created outstanding positioning in international markets, with strong growth in China. Similarly, it has continued with its activity in the Components sector and with development projects in the Health Sector.

Despite the serious crisis in the Machine Tools for Cutting Shavings sector, DANOBATGROUP had a good financial year and managed to end it recording a profit.

For the first time in the history of the Group the top ranked country in terms of orders was China, followed by Germany, Italy and India.

Among the orders won in 2010 we can highlight that for a manufacturing cell for train axels for the leading Italian manufacture in the railway sector. Also worth mentioning is the order for a € 6m vertical lathe of silver for the machining of pieces of the gear box for wind turbine generators.

From a technological point of view, highlights include the development of micro-mechanised prototypes: micro-mechanised laser and ultra-precision micro-milled. It has also developed a finishing process for the tips of aircraft engine blisks. Similarly, during the 2010 it has continued carrying out the investments that began during the previous financial year. In this way, it has continued with the
expansion of the production plants and the renovation of existing ones.

In terms of its subsidiaries, what stands out is the good performance of the German companies Bimatec-Soraluce and Danobat-Overbeck and the English company Danobat-Newall. Similarly, it began constructing the new plant in Pune (India), with work expected to finish toward the end of 2011. In addition to the production functions, the plant will support the commercial activity of DANOBATGROUP-India, the Group’s representative in this country, and also that of its agents. New offices were also opened in China. DANOBATGROUP-China, 19 years with a presence in this country, occupies modern facilities which will help them to support the Group’s commercial expansion plans in the Asian country.

In Metal-working machinery, Fagor Arrasate has experienced a 2010 with two clearly differentiated parts. It started the year with severely reduced demand, with the second half seeing a significant take-off in demand and the resulting improvement in the order books. The positioning in important growing countries such as China has substantially improved, managing to strengthen the business in that country.

Similarly, 2010 has also seen an improvement in the position with important clients in the automotive sector.

Siderurgia has continued with its positioning in the most outstanding agents in the sector and with significant levels of activity in Asia and the United States.

Therefore, Fagor Arrasate had a modest 2010 financial year in terms of sales but a very fruitful year in terms of capturing business and positioning, which promises us a 2011 financial year with high activity levels.

In 2010 Onapres has supplied an important facility in the maritime sector, which reinforces the capacity of Onapres to propose hydraulic press solutions for different sectors, including the automotive, railways, aeronautics, and maritime sectors.

In terms of machinery for packaging, 2010 has seen the culmination of the process begun in previous years for the consolidation of alliances and taking majority positions in various companies in the sector with the aim of strengthening its competitive position. An international aspect has been developed for the automation activity through winning important orders for the USA and Canada. A technology plan has been developed for UPTC and projects are being developed for the control of machines through the PC and remote access for the diagnosis of breakdowns and maintenance.
High value projects have been developed for the “medical” sector. A catalogue of hygienic thermo-shaping machines has been created, and various projects for the development of retractable and flow-pack machines have been launched. In addition, the business has been developed in Rumania, obtaining significant cost improvements, and the process in the value chain has been redefined with the updating of monitoring indicators.

Extrusion-blowing machinery for the manufacture of thermoplastic packaging: Urola has achieved outstanding growth in its activity. It has also positioned itself in the market with a new proposal: the new Urbi 6 which has stirred up great interest due to its innovative nature. That, together with the development of alliances and greater emphasis on its international commercial presence, has led to its participation in fantastic projects with internationally important customers in sectors such as the dairy and bottled water sectors, among others. It is another step toward the consolidation of a business designed to offer increasingly more complete and attractive solutions, supported by the dynamism of the teams.

Forming and Assembly continues to be affected by the crisis caused by the fall in prices and weak demand. Nonetheless, investment has increased significantly, as have the orders won, and the order book for Batz and Matrici has improved markedly.

In Casting and Tooling the forecasts for 2010 have been easily exceeded, with the levels of orders won being a record in recent times for Loramendi and notable in the case of Aurrenak.

In the section for the Equipping and construction of chambers, the efforts made in the previous year to strengthen its international competitive position continued. In this respect, particularly interesting is the development of the co-operative Kide, which in addition to making its first export sales from its Chinese subsidiary to South Africa and Kenya and continuing with its sales to India, also established commercial representation operations in Moscow and Mexico.

Fagor Industrial focussed its efforts on consolidating its international projects and developing new product ranges.

Similarly, it completed one-off projects such as the rebuilding of the Mugaritz restaurant with head chef Andoni Luis Aduriz, the comprehensive management of the kitchen service at Hospital la Fe in Valencia, and the installation of the kitchen and food preservation services in Hotel Porta Fira.

In other sectors, ULMA Agrícola has seen a strong increase in sales in export markets during 2010. Similarly, the project Eclipse has been launched in collaboration with Tecnalia to create compatibility between the production of photovoltaic energy and greenhouse production.

Also worth mentioning are the 29 improvement points arising from the Standard Structure Project with a significant improvement in assemblies, performance and costs. This project has involved multi-departmental participation across the organisation since it began in 2009.

And in ULMA Carretillas Elevadoras it is worth noting that through the efforts and sacrifice of the collective it has been able to straighten the situation up to virtually nil outcome. At market level, 2010 has seen a slight improvement with an increase of 4% with respect to 2009 and with a very strong leasing component given that more than 80% of the operations completed have been in this area and involved large fleets, mostly for logistics and retail companies.

In 2010, ULMA Carretillas Elevadoras completed the agreement to become the sole provider of forklifts for Azkar and to enter as a supplier for TDN, Seur, Kuhne Nagel, Sayca etc. and, therefore, to be present in the market for large accounts.

In a different area, we can highlight the development of the Business Model, with the collaboration of Ikerlan, for the launch of a new activity related to the regeneration of batteries.
It is remarkable the agreement reached by the majority of the members of ULMA support for the creation of two companies: ULMA Manutención, which includes the ULMA Handling Systems business and ULMA Servicios de Manutención, which includes the ULMA Carretillas Elevadoras business. After many years of being under the same name, now the two businesses are continuing their journey fully independently within the Group ULMA and are determined to strengthen their customer orientation.

Lastly, ULMA Handling Systems has continued strengthening its position in international markets and has become one of the market leaders within Material Handling Systems engineering. This market position has led to the development of projects such as Eroski M-50 and Felix Solis in the national market; Air France and Bonduelle in the French market, and projects such as Acrixlex and EBF in Brazil.

ULMA Handling Systems has continued generating employment in all its locations, and continues to focus on the diversification of its activity, with the creation of a new business line called Integrated Systems, which will meet the logistical solution needs of the mass retail sector.

### Industrial Components

The Industrial Component sector had a turnover of €1,957m, which is a 25% increase compared to the previous year. International sales represented 72% of the total.

In the area of Intercooperation, one of the most important developments is the consolidation of MONDRAGON Automoción, which brings together three divisions and twelve co-operatives from the industrial group that operate in the Automotive sector and whose function is to analyse and optimise relationships with the customers and promote new activities in the sector. In this sense, MONDRAGON Automotive has displayed an intense activity in the area of the Citycar/Sustainable Mobility, developing projects of the electric car, Modules and Components for it and the creation of CIDIA as an engineering firm in conjunction with Mondragon Unibertsitatea. Regarding the Citycar, it is the first vehicle conceived and developed by various companies within MONDRAGON. In fact, the materialization of this project has been quite an exercise of co-operation led by MONDRAGON Automotive and with the participation of technology centres Edertek Koniker and MTC; of Mondragon Eskola LKS Polytechnic and Diara that have counted on the experience of Lotus Engineering on the project. The first prototype was presented to the media earlier this year.

For Automotive Components, the 2010 financial year has been marked by a particularly intense general development in the sector which has placed us in a better position than before crisis, both in terms of turnover and in levels of employment and profitability.

The global automotive market which in 2010 faced an initial situation of uncertainty, has recovered the volume seen before the financial crisis and subsequent recession. The growth has been led exclusively by the emerging markets while the developed markets continue fighting to recover figures close to those recorded in 2007. China stands out as contributing more than 50% of the total growth in the emerging markets.

In this environment, Fagor Ederlan has experienced a financial year of growth which has allowed it to reach the activity levels seen in 2007 with a recovery of employment which exceeds 3,500 professionals and consolidates its market position. During this year Fagor Ederlan has closed important deals across the range of business lines, in both European and International projects, with one example being the project for the new BMW Mini discs. In the area of manufacturing blocks the year saw the installation of a new key moulding line for the manufacture of future blocks.

In addition to its presence in Central Europe, Eastern Europe and Brazil, Fagor Ederlan has established itself as a global supplier of solutions for the automotive
sector with the launch of its own production in China from 2012 and with the continuation of the framework of strategic alliances developed in the rest of the regions important for the sector, such as Korea, the USA and China.

The boom in new technology and the eruption of electrification in the market creates new challenges for companies such as Fagor Ederlan, which has established the collaboration project with Lotus Engineering for the design, development, market launch and production of the Range Extender engine, a project which culminated in 2010 with the agreement to manufacture prototypes of the new generation of this engine.

**Mapsa** with a changing scenario in the sector has finished a complicated exercise achieving important qualitative milestones such as diversification of its portfolio and consolidation of activity levels over a million and a half units.

**Ecenarro** consolidates its business development aimed at higher added value products through the creation of special parts, both in terms of production, with the implementation of a new line of cold-stamping, and orders.

**Maier** has continued with the development and application of new finishes and looks, with a significant renewal of its products and having finalised a serious remodelling and expansion of MTC, its Research Centre. Also, the uptake of orders has led to high occupancy of production capacity. In this context, international expansion projects have been activated which will become a reality next year.

**Cikautxo** has continued its focus on new applications and productivity in its processes, having excelled itself in winning orders with outstanding growth in its extrusion business and the positive evolution of components for electrical appliances. During 2010 its international focus has been intensified, culminating in agreements for it to enter India and China, which will begin operating in 2011.
For **FPK**, 2010 has been a year of great changes, with the transformation of society to a co-operative and subsequent acquisition of two subsidiaries, one in Germany and one in Brazil, multiplying its business dimension by 3.

**Batz Sistemas** has continued to develop with the plants in China, the Czech Republic and Mexico, with its strategy focussing on the diversification of customers. Similarly, worthy of a mention is its entry to the solar thermal sector through the supply of structural parts for parabolic cylinder and tower plants. In addition, it has taken on a leadership and collaboration role with the **FPK** business, in a project involving co-operation between the two companies.

**Components for Electrical Appliances** was characterised in 2010 by an upward trend in terms of turnover, with the export market playing, in part, the starring role. This year sales have exceeded the 2009 figures by more than 20%. Although they are still far from the levels seen in earlier years, the components business has considerably increased its market share with respect to the previous year.

Much of this increase has come for gas cooker businesses and thermoelectric mandatory implantation of safety rules in Europe and the variations in the market for ceramic cookers. This improvement in activity has also arisen as a result of the strong increase in demand for semiconductors, above all in the Eastern market, and the good positioning of components for washing.

In terms of new projects, in the components business the focus remains on new options for growth. As a result, the businesses started in previous years have been consolidated, such as the EHE co-operative, created for microgeneration systems; Ceramat, for gas burners; Isoleika, for insulating panels, as well as thermo-electric and supercondenser projects currently in the development phase.

Although throughout 2010, the Stirling Centre has been consolidated as a technological centre dedicated to sustainable energy in the home. In the renewable energy sector, we can highlight the creation of a new co-operative company, Soterna, in the town of Oteiza (Navarre) where they manufacture solar systems with a 150 litres tank included.

In **flanges and forged piping accessories for the processing of petroleum-gas, petrochemical plants and the generation of energy**, ULMA Piping had a good financial year given the market situation. The focus in 2010 has been the industrialisation of many items, taking decisive steps in the consolidation of the EPC division to deal directly with engineering as well as complementing its production range with the acquisition of a new forge specialised in special materials, small batches and flexible production.

In **terms of copper and aluminium electrical conductors**, Ederfil-Becker has achieved strong growth in revenues (25%), along with a control and search for efficiency, improving costs and productivity which have led to an improvement in profitability. From this starting point it focuses its efforts on improving its position in overseas markets and the efficiency of its processes and services, optimising the organisation and performance of personnel.

In the area of transformers, 2010 and 2011 will be transition years for **Alkargo**, given the lack of investment in the Spanish electrical sector. As a result, the intention is to increase penetration in overseas markets and implement the project to develop the knowledge and facilities to be able to supply high power transformers. That, together with the consolidation of people and processes, will be the foundations for the future.

For its part, Hertell, manufacturer of vacuum accessories, has continued to expand its overseas line, which had already begun years ago.

For **Components for transporters**, 2010 was the second year of ULMA Conveyor Components as an independent business integrated into the ULMA Group.
Once again, in a very demanding environment, as a result of the new reduction in new installations and the deterioration in market conditions, both in conservation and installations, the international market has helped to partly offset the reduction of activity in the Spanish market.

In terms of the financial situation, the growth of the Division is solid and places it in a position of having a strong capacity for self-financing, which reinforces its position in terms of the next increasingly different and demanding years.

The year 2010 has been a year of evaluation, at the end of the PEDEL cycle, and reflection in order to define the strategic areas for the next four years. The Strategic Vision (VEO 2011-2014) will consist of five areas: international, service, profitability, transformation and innovation.

Innovation continues being, above all, the main focus for development as the key to the future. The year 2010 has resulted in advances in the Orona IDeO – innovation city project, an ambitious project which will undoubtedly create a turning point in the area of innovation and become a European example.

In 2009 a Strategic Plan was established and as a result of this a Management System was launched in 2010 based on Processes that were designed during 2009, improving its internal coordination and ability to respond to customers. The Innovation Management System was also introduced and various projects were launched to help add value to the product and bring it closer to its Vision. In addition, the overseas sales network was strengthened and work took place to approve customers considered strategic in its internationalisation process.

Construction

The crisis continues to greatly affect this sector, particularly those businesses whose performance is limited to the Spanish market. The set of activities MONDRAGON integrated into the construction sector achieved a turnover of 1,029 million euros, in line with the level reached in 2009, with worldwide sales of 43% of its turnover.

In the Division of Elevation both sales and results have improved from the previous year. This position at the close of the financial year can be considered excellent given the ongoing decline in the residential construction sector and the signs of weakness that continue to be conveyed by the consumption and investment statistics.

Maintaining these results has required particularly significant efforts to adjust efficiency to the new levels of demand, as well as efforts in the consumption of and investment in strategic resources and in winning market share in conservation.

In terms of employment, largely due to the inorganic growth in countries such as Ireland, Holland and Belgium during the 2010 financial year, the Elevation Division has experienced an increase in the workforce of 10%, ending the financial year with 4,052 jobs with an increasingly international profile.

In terms of employment, largely due to the inorganic growth in countries such as Ireland, Holland and Belgium during the 2010 financial year, the Elevation Division has experienced an increase in the workforce of 10%, ending the financial year with 4,052 jobs with an increasingly international profile.
The Division continues to position itself as an expert in solutions for accessibility and urban mobility both nationally and internationally. In this context, we can highlight the following one-off projects during 2010: at a national level, the Metro in Barcelona, Metro in Bilbao, Alicante, Santiago and Castellón Airports, and Tecnoparc in Reus, among others. At an international level, the car park at Versailles and Jean Perrin de Clermont Ferrand Centre in France; Shannon International Airport and Aviva Stadium in Ireland; the Espírito Santo Hospital and Escola Carlos Amarante in Portugal; in the United Kingdom, Bristol Airport, the Basketball Arena and Law Courts in Salisbury; and to finish the Vierstroom Zorggring and VDI in Holland, among others.

In industrialised systems for construction, ULMA Construcción, despite the depressed market, registered a slight decrease on the figure for 2010. 60% of the turnover came from overseas markets. Considering the complicated situation in the Spanish market and its future prospects, both the headquarters and the commercial logistical network serving this market were restructured, resulting in a significant adjustment.

In Metal Constructions, URSSA had a good financial year, with a growth of over 10% in its turnover, supported by its increasing international presence and positioning. In terms of the one-off projects carried out over the last financial year, we can highlight the following: in Urban Construction, the “Foundation Louis Vuitton” Building in Paris, designed by Frank O. Gehry and the Bicentenary Cultural Centre in the old Palacio de Correos Building in Buenos Aires; and in Public Works, various access viaducts to Bilbao for Interbiak, and 5 bridges among which we can highlight, due to its 1,500 ton metal structure, that for the Túnel dels Dos Valires, in Encamps, Andorra. Lastly, for Capital Assets, Paceco España awarded Urssa the contract for the construction of two port cranes, both with 1,900 ton structures, for the ports of Tarragona (Spain) and Sines (Portugal).

In prefabricated structures for Construction, ULMA Hormigón Polímero fully met its turnover forecast, achieving excellent results. As a result, and despite the reduction in sales, it has successfully overcome the three years of crisis from 2008 to 2010. The main achievements were: the plan to adjust costs and expenses allowing for an improvement in productivity and the drive to manage material inputs skilfully, taking advantage of opportunities.

The following actions arose as a result of the Strategic Plan for the period 2011 to 2014: starting to promote a new business line (enclosure of façades), starting to promote the technology transfer business, strengthening activity in busbar trunking, a drive to increase activity in architectural prefabricated products for restoration, entering the Brazilian market and expanding the retail base across the world, reviewing and optimising the functional organisation and strengthening the Hobekuntza management model and implementing the Balanced Scorecard (BSC) management tool.

Etorki, involved in operating and cutting down forests to produce wood, experienced a 28% growth in its activity compared to the previous year, largely owing to its export sales and to consolidation in some sectors of its activity, such as Euro pallets.

From a management point of view we should mention the commercial focus in 2010 on the different industrial packing sub-sectors and the strengthening of the forestry operating activity which allowed it to reinforce its position in the supply of roundwood.

Lana, involved in the manufacture of wooden products for shuttering and the design, calculation and assembly of laminated wooden structures, managed to increase its turnover by 10% compared to 2009, despite the continued deterioration in the construction sector on the Iberian Peninsula and the strong slow-down in activity in the rest of Europe.

This has been possible thanks to the increase in its sales in Central and Eastern Europe through its subsidiary in the Czech Republic, the commercial efforts made in
North Africa, the addition of new products to its range and the progress in its business for laminated wooden structures, ELUR.

All of that, combined with the internal measures applied to minimise overheads, contain costs and increase internal efficiency, has allowed the company to reach a turning point after its results in 2009.

**Business services**

The environment described at the start of the year has not changed overall, although there have been substantial developments in some sectors. On the one hand, financial resources have moved out of construction and, even more so if that is possible, out of the Spanish market. All businesses related to this sector, LKS Ingeniería, Ondoan, and mcctelecom, have seen significant reductions in demand and an unprecedented price war.

Continuing with the negative aspects, one must mention the gradual halt brought during 2010 to public investment and spending. This affects all activities, but it has a particularly significant impact on LKS, LKS Ingeniería and Alecop due to their strong links to the public sector.

However, although the environment has not helped us, the innovation and internationalisation efforts made have been rewarded. This is a clear policy, one which began a few years ago and which is bearing fruit. It is how profits have managed to be sustained for all of the Division’s businesses.

In addition, there has been entry into new countries: China, India, Colombia, Chile… which have been opening up over the last few years with a constant flow of innovations in their value propositions.

More specifically, LKS Consultoria achieved sales which represented 97% of the figure for 2009, with significant developments such as the comprehensive purchasing project for Lazkao forges and the development of the management model in the different Repsol businesses and departments.

**LKS Ingeniería** achieved sales of 91% of their 2009 levels, despite the collapse in the building and public works market, and saw an improvement in results of 12%. This resulted from important projects such as the study of alternative town plans for Zorrotzaurre in Bilbao Buesa, the new pavilion Buesa Arena in Victoria-Gasteiz and the support for the implementation of Danobat in PUNE (India).

For **Abantail** this has been a year of consolidation after three significant years of growth. The new web-based configurator for Orona commercial or development of injection moulds in the configurator for Aurrenak are projects to be highlighted the 2010 exercise.

**Ondoan** has also been operating in a very complicated market but it has managed to respond flexibly to meet the increasingly complicated requirements of the customers. Supply easily outstrips demand and this has given rise to a serious price war. Still, 2010 has remained at 100% over the previous year, and with business results 40% higher than in 2009. The air conditioning and LHV for the Toledo Hospital for Acciona-Ferrovial, the mechanical installations in the Basque Culinary Center, and the comprehensive maintenance of the facilities in the Social Security buildings in Gipuzkoa are some examples of our projects in 2010.

**MSI** has been involved in projects across the world: Mostaganem water pumping stations for Isolux Corsan in Algeria, levelled low voltage lines for Benxi in China, and the reform of the pickling line in Macedonia for Arcelor Mittal. These have involved considerable effort in terms of the organisation of projects and personnel. In the end sales amounted to 115% of their 2009 level, although the results were weaker than in 2009 thanks to allocations resulting from the internationalisation work.
As a company linked to the fortunes of the Construction sector, mcctelecom has been significantly affected by the fall in the market but has managed, despite everything, to achieve sales of 107% compared to the previous year and its results are reasonably unchanged. This has resulted from important projects such as the telecommunications system in the Extresol and Manchasol solar thermal plants for Cobra-Sener, the electronics network for the new Campus Universitario de Oñati, and the virtualisation and storage service for Guardian Glass.

In the world of educational services, Alecop stands at 68% of its 2009 level as a result of cuts in public sector spending on education and the failure to win some one-off projects in Algeria and South America. The co-operative is undergoing a process to transform its business, the results of which should be evident from 2011 onwards.

**Mondragon Lingua** had an excellent financial year, with significant advances in the consolidation of its traditional centres and the renewal of its value propositions, focussing on innovation. Its 2010 sales were 101% of the level seen in the previous financial year, and its results, at 344%, were clearly better. The financial year now closed saw the addition of new and important clients such as Vidrala, Tekniker and the Basque Parliament.

In the **Graphic Arts** sector, 2010 has been an important year for **MCC Graphics**, one which has seen a rigorous strategy to improve added value and to enter France for strategic clients. This has led to strong growth, together with a very significant reduction in expenses and costs, resulting in a good return on sales of 2.5%.

The company has also established an attractive and stimulating business for the future, in which in addition to the unification of all the businesses into a single company, there is a plan to decisively and extensively take on other services and communication media based on digital services and the ICTs.
This area involves the Eroski Group, whose main activity is retail and main company is Eroski, S. Coop., and Erkop, a second-degree co-operative containing five co-operatives from the agrifood sector, along with the companies in which it has holdings.

During the 2010 financial year there has been a continuity of the economic environment characterised by a reduction in household consumption and this has affected the retail sector. In the case of the Eroski Group, it has dealt with the situation by launching new own brands, with competitive prices and confirmed quality, which are therefore attractive to consumers.

Among these new launches we can highlight a range of everyday products at permanently low prices, including 226 items from packaged food, fresh food and household and cleaning items. Similarly, a new line of health and beauty products has been launched, with 128 product items whose most important characteristics include those of being hypoallergenic and being clinically and dermatologically tested.

With the comfort of the customer in mind, there has been a continued focus on online services, through the opening of different retail areas. The online supermarket has rolled out to ten new cities, which adds to the 14 cities in which this service was already operating. Its sales volumes have followed an upward trend, growing by 32% with respect to 2009.

The online offer has been extended with the electronics and electrical appliances shops, which serve 34 provinces. Using a very simple navigation system customers can easily search for products and compare them with others, also benefiting from exclusive promotions and the chance to receive offers by E-mail.

It is also worth nothing that Eroski already has official profiles in two of the most popular social networks, namely Facebook and Twitter, having 5,000 followers in Facebook.
Another area that has been worked on in 2010 is the process of improving the shops, with a drive towards self-sufficiency in energy through the use of self-sufficient and ecologically sustainable energy, leading to significant savings in consumption and in CO2 emissions when compared to conventional options.

In terms of Erkop, the most significant developments over 2010 include: reaching a collaboration agreement with Vega Mayor for the supply of IV range products, which has given a decisive boost for Artandi, a company owned by the Garaia and Barrenetxe co-operatives; the launch of horticultural products by the Kaltitatea Foundation; the start of an ambitious leadership project in the Auzo Lagun Group; and the taking on by Erkop of the Presidency of the Precluster de Alimentación de Euskadi (Basque Country Food Pre-Cluster), an organisation which brings together 32 companies.

As a whole, the Retail Area has recorded total gross sales of €8,277m in 2010, which is a slight reduction of 2.4% when compared to the previous financial year.

Net investment has been -€327m as a result of the sale during the year of investments in properties that had been leased and the sale of some non-strategic assets. Average employment over the year has been 42,260 jobs, although we should add that owing to the difference between full time and part time jobs, the actual number of employees is closer to 50,000.

With regards to profitability, the Eroski Group closed the year 2010 with a net result of -€64m, up 7% from the previous year. Although Eroski S. Coop., matrix of the Group, has made a profit of €93m, the overall results have been conditioned by a charge of €70.5m for impairment of assets, according to the criteria set by the international accounting standards. For their part, co-operatives of Erkpo have managed positive results in the amount of 15 million euros in 2010.

Also worth noting is the renewal for the seventh year running of the SA 8000 Social Responsibility certification, which this time has been obtained through ratification by external audit. For the first time this was carried out without warning, but this did not alter the fact that we passed with flying colours.

Finally, and in relation to the events the strengthen the image of Eroski, worthy of note is the recognition of the Eroski brand as the ninth best Spanish brand, as identified in the study carried out by the strategic brand consultancy Coleman CBX. It is also worth noting that last year it was awarded the “Spanish Food” award in the category of the retail and sale of food. It collected the award from the Minister of the Environment and the Rural and Marine Environment, in the 22nd edition of the award ceremony for these prizes.

Support of new sectors and Corporate projects

In 2010, the Corporate support centre has been specially devoted to strengthen the MONDRAGON Health Project, the corporate branch in health sector. The results are becoming important, pushing ahead with the e-health, health sector oriented training and implementing industrial competences in health sector. The mid-term goal is to configure a powerful engine for growth for MONDRAGON.

Likewise, the creation of a BAC (Business Acceleration Center) has been encouraged from the Promotion Center with the aim of supporting intercooperational projects among the different corporate branches. Apart from working on the identification of new and innovative projects and the way to promoting them, it has become through the Elkarbide forum in a centre for dissemination of activities, working dynamics and entrepreneurship.

Research and knowledge

Technological innovation and training, are the basic elements to configure the Knowledge Area of MONDRAGON.

In 2010 MONDRAGON spent € 144m in R+D+i, of which 16.8 millions went to the frame of Corporate plan Science and Technology, while the rest went to co-operatives, technological centres and Mondragon Unibertsitatea.

In 2010, the Industry area spent a budget of 7.72% over the value added in R+D, which was channelled through the R+D Departments of the co-operatives, activities of the, technological centres, corporate Technologies and Science plans and Garaia Innovation Centre. In this way, the Corporation as a whole owns 716 patents for invention.

Furthermore, it participates in 20 Zenith projects, 14 Etorgai and 42 international projects directly related to the Science and Technology Plans, of which 12 are led by companies and Corporate centres. On the other hand, 70 plan researchers have carried out doctoral theses about issues related to it.
Finally, 21.4% of sales in the Industry area in 2010 were products and new services that did not exist five years ago, this ratio has duplicated in five years, following the internationalization rhythm of our productive activities and services all around the world.

Corporate plan of Science and Technology
2010 has been the second year for the implementation of the Science and Technology Plan of 2009-12. The projects have been developed as planned and with an active participation of the co-operatives, derived from the strategy of the research lines taken. The internationally approached innovative model followed has definitely reported good results.

Among the goals of the Science and Technology plan it is worth mentioning the next ones: to push up with a high degree of innovation by means of projects of high impact in the organization; to help to the smooth functioning, co-operation between companies and technologists, fostering common interests consortiums that allow knowledge transfer among them: and to serve corporate governance to guide coordinate and align activities of Mondragon Unibertsitatea and Technological Centres.

The 2009-2012 Science and Technology Plan covers the next points:
- New materials and manufacturing systems
- Information and communication technologies
- Technologies for energy and sustainability
- Technologies for health
- Technologies for Business Management, Research in Values and Participatory Management

The Plan contains 22 strategic lines in which 39 co-operatives work, all our technological centres and Mondragon Unibertsitatea. The projects included are those of highest risk and farthest reaching reaching in the Corporation, all of them oriented to their transfer to business and market.

Technological centres
- Ikerlan-IK4, historical reference of the Corporation in research, obtained in 2010 a total income of € 20.2m, of which 6 millions corresponded to own research and strategic projects financed by the Basque government, the General Government Administration, the Gipuzkoa Provincial Council and the European Union; and 12.7 millions corresponded to R+D projects under contract to companies. 225 researchers and technicians, together with 41 trainees work in their headquarters of Mondragón-Olandixo, Mondragón-Garaia and Miñano (Álava).

At the European level, IKERLAN-IK4 has kept in the 7th framework programme a sum of € 4m of financing.

All over 2010, IKERLAN-IK4 has signed framework agreements for collaboration with TU Vienna and the University of Edinburgh for a research line of “Embedded Systems”, with KULovaina for “Design, Simulation and control of Mechatronic Structures, with the group CGIP of the University of Valencia for “Mass customization of Product and Service”, and with ISEA-RWTH from Aachen for “Conversion and control of power electronic systems” and “Power storage”.

In this season, the creation of a new company called PRESSENSOR S.L. has been carried out IN in collaboration with ZAREL and CIDETEC-IK4. This company is devoted to exploiting pressure sensors based on polylithiophenes in different scopes of application, where both CIDETEC-IK4 and IKERLAN-IK4 contribute their knowledge.

Concerning the protection of knowledge generated by IKERLAN-IK4, there are two new patent applications related to Microsystems activity. Registration of property has been done too concerning methodology of appreciation of Disruptive Technologies.

- Ideko-IK4 is a technological centre specialized in manufacturing technologies and industrial production whose mission is contributing to sustainable development of an innovative and competitive business environment.
2010 has been very positive for Ideko-IK4, where it had a year-on-year growth rate of 4.3%, thus surpassing € 7.6m of income. 65% corresponded to R+D projects under contracts with companies, and 35% to research projects with support of several institutions.

Through the year Ideko-IK4 has kept investing money in facilities. Thus, he has invested a big sum of Money in equipment, more than a million euros, also financed by the General State Budget and destined to three types of activities: Advanced Equipment of Dynamics of High Requests, Advanced Equipment for Measurement and Non-Destructive Rehearsals and Equipment for Alternative Manufacturing Processes.

The staff of the centre is made up of 101 workers, 17 doctors en 10 Phd students. 9 papers were published in SCI magazines in 2010, and a patent extension was achieved.

Since its foundation, Ideko-IK4 has aimed to establishing bonds of confidence with customer companies to transfer the results of their R+D to their activities. In this sense, it is worth mentioning co-operation agreements in R+D with 3 leading companies in the tool-machine and mechanization scope, as well as a fourth agreement with technologically oriented railroad manufacturers.

At a global level, the centre has grown owed to 9 active european projects, where 3 of them are led by the centre itself, and with the approval of 4 new projects (2 of them led by the centre). At the national and regional level, Ideko-IK4 has participated in 2 strategic projects in 2010 (Project ALEXANDRIA, coordinated by Ideko-IK4, where 28 associates are involved), 1 National Plan projecto of R+D, 5 projects ETORTEK and 6 projects ETORGAI (4 new projects approved en 2010).

- **Lortek-IK4** is a technological centre specialized in technologies dealing with joining materials. After a 9 years running time, Lortek-IK4 is in constant development to be the most technologically innovative. Since December 2010 it is also member of the alliance ik4 together with another 7 centres, thus going one step further concerning synergies and participation in big consortia and projects.

Lortek-IK4 started in 2010 a new building, and is expected to be finished in 2011. This building will hold the whole of its activity, currently distributed in different buildings of the Goierri innovation hub.

Lortek-IK4 develops its activity oriented to various sectors including aeronautics, transport, automotive, capital equipment, tooling, construction and health.

In 2010, apart from the projects IBE-RM related to new technologies of additive manufacturing, Integrauto was created in order to integrate new processes and functions in automotive components, and to participate in an European project of the aeronautical domain. It is worth mentioning that during the year 18 reports have been published, and a co-operation frame has been started with Osakidetza (with the support of MONDRAGON Health), thus allowing to identify new applications to specialization lines of Lortek-IK4 in this domain. Also, it has kept co-operating with the Regional development agency Goieki, with the aim of tractionating technological and innovative capabilities of the companies of Goierri.

**R+D Business Units**

- **Aotek**, that is devoted to Automatization and Optics, has the goal of exceeding in the domain of integrated technologies in products developed and manufactured by Fagor Automation: numerical controls, regulators and position collection systems.

In 2010 Fagor AOTEK participated in co-operative research projects such as chameleon, an European project belonging to FP7 that tries to get multifunctional tool-machines through the use of intelligent systems; Impeler, CDTI project integrated to increase functionalities in big tool-machines; Fore, project belonging to the Innpacto programme trying to record and read metallic
substrates grid patterns; and the projects Manufacturing 0.0 and Profuture, inside the Etortek programme and in co-operation with CIC Margune for the research of new processes of mechanization, more accurate, faster and energetically efficient, and the development of non-conventional tool machines that are portable, accurate and adaptable.

- **Edertek.** It has been branded by the development of the project “Range Extender” in co-operation with Lotus Engineering.

Likewise, it is worth mentioning the Project Alicor oriented to lightweighting all components of the Brake Corner. Also, the project oriented to increasing the use of fragmented casing in Powertrain has been finished.

Dealing with participation in international forums we have been present in the “Science and Processing of Cast Iron” celebrated in Egypt and in which Edertek has participated by introducing the paper “Improvement of the Metallurgical Quality of Ductile Iron by Conditioning”.

- **ETIC (Embedded Technologies Innovation Center) continues the consolidation process as a centre for R+D specialized in Microsoft embedded technologies. During the year 2010 has kept participating both in European projects (Artemis and ITEA2) and national and regional ones. Also, it has increased co-operation with companies in projects under contract during 2010. Relations with Microsoft keep growing stronger both in Madrid (Spain) and in Redmond (USA) and the network of innovation centres of Microsoft in the world.

- **Fagor Hometek,** once established innovation in the network, it has elaborated a map containing all innovative projects of Fagor Group (Currently 80 projects). Owed to the formal opening of Fagor Hometek in November 2010, either the main innovation projects approached from different technological areas as well as products integrating this centre were displayed.
MONDRAGON Corporation has chosen ISEA as the support structure of his Business Acceleration Center, a special structure devoted to facilitate processes for launching entrepreneurship by fostering intercooperational new businesses.

Koniker is a non-profit technology centre, declared to be in the public interest, and specialized in research and development of new technologies related to the assembling and shaping processes.

Koniker has been the first research centre in the Basque Country getting three certificates: UNE-EN ISO 9001: Quality system, UNE 166.002: R+D+I management and UNE 166.006: Technology surveillance.

The most relevant lines of investigation developed during 2010 were:

- Energy storing systems for direct drive servopresses.
- New architectures for slotting machines in the electrical sector.
- Ecological pickling new facility for veneer processing.
- Intelligent damping system for cutting extremely hard materials
- New equipment for calibrating road rollers.
- Hot conforming of boron in steel.
- Conforming of heavy-bodied materials.
- Manufacturing system of thin photovoltaic panels.

Additionally, technologies for social networks and support semantics for co-operative innovation have been developed during 2010, with the aim of using it with associate companies.

ISEA is an innovation and entrepreneurship centre specialized in Business Services. It is promoted by the Engineering Division and Corporate Services. Following its social objective ISEA has promoted a Business Acceleration Center - BAC.

BAC was regarded as “modelic” for its system of management in MONDRAGON in 2010. Subsequently, MONDRAGON Corporation has chosen ISEA as the support structure of his Business Acceleration Center, a special structure devoted to facilitate processes for launching entrepreneurship by fostering intercooperational new businesses.

In the Washing Area, we have achieved energy savings up to 60% of energy. Automatic detergent dosage systems have been developed depending on quantity and dirt. Likewise, in the context of aid programme CENIT, a project focused on further aspects of washing is being carried out.

In the Cooking Area, a project is being carried out to achieve culinary excellence at home. A new worktop and a new microwave called UOVO have been developed.

In the Cold Area, there has been research on vacuum systems and temperature preservation regulation. There has been progress in the integration of a Vac Packer in the fridge, as well as flexible configurations, application for light pulses and other innovative aspects both concerning technology and design.

In the Electronic and Communication Area, a technology platform has been defined and developed for the assistance and support service deployment at home through the use of 2 LEDs, one devoted to monitor health parameters and other for diet advice and physical exercise.

There have been several several modellings in domains such as thermodynamics, mechanics, acoustics, nutrition and anthropology to improve its catalogue of products.

As as result of these activities of innovation, there have been 55 patents all over 2010.

ISEA is an innovation and entrepreneurship centre specialized in Business Services. It is promoted by the Engineering Division and Corporate Services. Following its social objective ISEA has promoted a Business Acceleration Center - BAC.

BAC was regarded as “modelic” for its system of management in MONDRAGON in 2010. Subsequently, MONDRAGON Corporation has chosen ISEA as the support structure of his Business Acceleration Center, a special structure devoted to facilitate processes for launching entrepreneurship by fostering intercooperational new businesses.

Koniker is a non-profit technology centre, declared to be in the public interest, and specialized in research and development of new technologies related to the assembling and shaping processes.

Koniker has been the first research centre in the Basque Country getting three certificates: UNE-EN ISO 9001: Quality system, UNE 166.002: R+D+I management and UNE 166.006: Technology surveillance.

The most relevant lines of investigation developed during 2010 were:

- Energy storing systems for direct drive servopresses.
- New architectures for slotting machines in the electrical sector.
- Ecological pickling new facility for veneer processing.
- Intelligent damping system for cutting extremely hard materials
- New equipment for calibrating road rollers.
- Hot conforming of boron in steel.
- Conforming of heavy-bodied materials.
- Manufacturing system of thin photovoltaic panels.

Additionally, technologies for social networks and support semantics for co-operative innovation have been developed during 2010, with the aim of using it with associate companies.

Maier Technology Centre (MTC), specialized centre for research, development and decoration of pieces for automotive and electrodemestic sectors, working in the engineering sector together with its customers.

In comparison with 2009, a year of intensive work, the activity of the centre has grown in 2010, mainly
because of the acceptance of projects from all car manufacturers, as well as the introduction in premium clients such as Audi.

Likewise, co-operation with PSA and Renault has been maintained, thus leading to the presentation of breaking technologies for decorating metallic and painted covers.

It is relevant to say the expansion and restructuring project has been finished, with an extension bigger than 1800 m² for new laboratories, pre-industrial research areas that mean a new step further for the centre.

**Orona eic.** The strategic reflexion of 2010 reinforces the goals of Orona eic (Elevator Innovation Center) for the next 4 years, supported by the increasing long-term research effort with a coverage of 57% for the next four years. Another remarkable point is the agreement with institutions allowing the beginning of work for the new Orona IDeO. A new co-operation pole for the company, University and Technology Centres that leads to the foundation of a new Technology Centre for research of advanced implementation of electric power storage. Under the name of G3A, this centre will allow the Orona eic researchers from Ikerlan, as well as other companies joining the project, work with these new technologies in a shared space endowed with the most modern infrastructures.

This line of investigation of energy storage, together with other traditional ones like tribology, vibroacoustics, machines and converters design, safe and intelligent electronic systems, and M2M systems oriented to maintenance.

**CS Stirling Centre.** Created in 2009, CS Stirling Centre S. Coop. Is in consolidation phase. Their main objectives are be a scientific and technological bridge to improve products of its business group (in a R+D+I unit integrated in the Basque network of science and technology) and mainly develop products, technologies and companies in the home sustainable energy domain.

Including 2 Phd’s and 3 Phd students in its small staff, the bet for excellence is clear. Besides, international co-operation already existent with companies from New Zealand, United States, Russia or Germany augur a remarkable capacity for interrelation and analysis and incorporation of first level technologies to our industrial framework.

### Technology centres and R+D units in Mondragón 2010

The mastery of this new knowledge frequently requires non-existent capacities in the centre, so co-operation with other entities is convenient. It is worth mentioning several actions carried out with entities of the Corporation such as Ikerlan IK-4 or Mondragon Unibertsitatea.

In **ULMA PTC Packaging Tecnological Center.** It has been a year of continuously long term launched projects (CENIT, ETORGAI, specialization and technology
The own technology project development for process automation has been continued through the use of a robot of exclusive design. In the same way, co-operative projects with companies in Japan and Italy have been developed, and new solutions have been offered in the development of packing machines like Flow Pack and Termoformadoras. It is also relevant to mention the labour in designing full processes for packing for clients. In the automatization domain, artificial vision has been developed for processes, as well as innovation in motion control and integration of these embedded systems. Finally to highlight the technology extension to easily clean different product lines to offer a high range of solutions, all of them suited to the food industry.

**MIK - Mondragon Innovation & Knowledge** is an R+D+i centre specialized in social and organizational innovation. It was created in 2001 to contribute to competitiveness and company development. Its domain comprehends 4 lines of R+D+i: Opened Company, entrepreneurship and new businesses, Internationalization, Social Economy and Participation of People. In 2010 MIK was asked by the Industry, Innovation, Commerce and Tourism Department of the Basque Government to lead the strategic project ETORTEK-Openbasque: Towards a model of innovation based on co-creation. Having several headquarters in Oñati and Irún, MIK belongs to the Basque Network of Science, Technology and Innovation.

**Garaia Innovation Pole**

Concerning the activities in this space for innovation, it is worth mentioning:

- The incorporation of Saiolan Centre in the new, modern facilities where 35 persons currently develop their work.

- On the other hand, promoted by the Home Cluster
of Euskadi (ACEDE) the development of a “Living Lab” has been started (a research concept focused on the user and opened innovation with participation of multidisplinary teams). This equipment is financed by the MICINN and will come out in summer 2011 with near € 9m investment.

Finally, it is relevant to say that as a complement to the services offered by the Pole, the opening of a restaurant, cafeteria and catering as a support for the different activities organized by the companies in the domain of GARAIA. 7,700 persons have attended to these events, thus being important the node of Garaia Empresa Digitala, activities framed in the initiative of information society promoted by the Basque Government.

Mondragon Unibertsitatea
During the course 2008-10, Mondragon Unibertsitatea has offered all its degrees adapted to the European Framework of Higher Education. In the technical domain, the Higher Politechnic School has offered Engineering Degrees. The Faculty of Economics has taught its degree in Management and Business Direction, as well as a New Degree called “Grado en Liderazgo Emprendedor e Innovación”. The Faculty of Sciences also has 2 Degrees on education and Audiovisual Communication.

6 double diplomas have been offered, all of them in co-operation with French universities in the domain of engineering.

Concerning the postgraduate, during the year 2009-10, 4 new Official Masters have been implanted. Likewise, new degrees are being developed for the academic year 2010-11.

Besides, with the aim of giving the experience the university has. There is a collaboration with the chamber of commerce of Álava, Gipuzkoa and Bizkaia,
in convocations at a level state where Mondragon Universitatea heads 3 “strategic and singular” projects as well as in Europe, participating in several projects. This research activity contributed to the reading of 18 new theses.

The main characteristic of the year 2009-10 is the number of strategic projects which have been developed, such as the Basque Culinary Center, The New School of Businesses, the research and technological innovation centre, MU PLUS, the ON LINE project of MU, MEI-Mondragon Educación Internacional, and the Campus of Excelencia Internacional.

Finally, concerning entrepreneurship, inside the plan “Mondragon Ekiten”, in was celebrated the fourth edition of entrepreneurship meeting, that was attended by 130 students of Mondragon Unibertsitatea. Similarly, contest for new ideas have been expanded in the 3 domains of development: “new business ideas”, “rural environment development” and “youth, recreation and sport”.

Other training centers
During the 2009-10 academic year, 402 students attended Politeknika Ikastegia Txorierri in formal education and 42 courses (2,557 hours) in vocational and continuing training were taught, attended by 404 people, mostly in employment. In this sense, it emphasized the organization and development of a total of 6 courses on the application of ICTs in the classroom, in which 108 teachers have attended over 30 training centres.

In the international area, 15 students undertook placements in European companies (Netherlands, Germany, Ireland, Italy and Lithuania). Also, two professors from the department of Commerce and Marketing conducted a six-day stay in Holland, where they had the opportunity to experience diverse educational activities at other centres that offer this specialty.
It has successfully conducted the first phase of the transfer of innovation projects in which participated the institutions: CATELAN (Cultural Awareness Training in vocational through E-Learning) and IOA2 (International Operation Agent II), projects funded by the Leonardo Da Vinci European Programme and the Basque Government (€120,097), and in which collaborated other European centres (Germany, Turkey, Estonia, Belgium, Holland, Finland and Lithuania).

In the area of entrepreneurial culture, the centre remains in the incubation stage (transfer of premises and equipment) to the company Ardolan, having participated in the implementation of 4 other self-employment projects for which it has the co-operation of various institutions like the Basque Government and the Worklan Association (of which it is a promoter).

As an entity within the Parekatuz network for gender equality (promoted by the Provincial Council of Bizkaia), the “Learn to Choose” programme has been defined, counting on the collaboration of the Txorierring Behargintza. Through this programme, students are offered the opportunity to stay in business under the gender perspective, with the recognition and financial support from the Basque Institute for Women (Emakunde).

Lea Artibai Ikastetxea obtained authorization from the Basque Government to initiate a new training course in formal education from September 2010 entitled “Energy efficiency and solar energy” that has been very successful.

The training course “Production Scheduling in mechanical engineering” has been adapted from LOGSE to LOE.

87% of students in vocational training has obtained a job matching their studies.

We have taken part in 5 projects TKNIKA obtaining successful results.

We have carried out the diagnosis of needs in three companies for the first time. At the same time, we have organized
training plans in several companies. We have worked in collaboration with some associations and companies in the sectors of energy and automobile. We have managed aids for company training which were undergoing ERE (Redundancy Plans). We have made our first steps to offer online courses.

In continuous and occupational training, we have provided 138 courses (11,769 hours) some of them from our own catalogue and others tailor-made aimed at active or unemployed personnel.

Regarding University offer, it is important to highlight that the official Masters “Plastic and Product design” has been started. Homologation process initiated in 2008-09 has proved fruitful obtaining this year the first homologations within the State system.

Lea Artibai Ikastetxea as a supporing centre in LANBIDE which is the province of Lea Artibai obtained the homologation by the Basque Goverment Labour Department for two more orientation trainers. Through this service 123 job demands have been managed, 257 people have found a job and 1,333 people have been oriented in terms of finding a new job or change the one they already had.

The building of innovation town Berrikuntza Gunea was succesfully completed in July, placing it in the 3,682 m² covered by Foundation Azaro as well as Leartiker Materials and The Enterprise Incubator. During 2010 eleven new economic activities have been started in the province. Nine of them have taken a new Vat Number and two have taken diversification projects within companies, creating 33 new jobs.

Regarding technical services activities and research - internally known as Leartiker - 6 research projects have been carried out with companies, 4 scientific writings have been published, 20 new customers have been made and 14 product improvement solutions have also been carried out.
Otalora

Close to 5,500 people attended training sessions and programmes given in OTALORA, MONDRAGON Management and Co-operative Training Centre.

In the Area of Co-operative Education the large presence of groups (governing bodies, directors and partners) to participate in co-operative education programmes was particularly highlighted. Likewise, courses for members of governing councils and sessions to welcome new partners and managers

In Management development, new editions of MBA Executive and IKAS were rolled out, and specific training sessions were delivered for section heads. Likewise, in cultural development, various surveys were carried out on cultural organisation, cultural diagnostics were undertaken, and previously defined profiles were evaluated.

In the Area of Leadership and Teamwork, a total of 30 groups took part in this type of programme, and 55 cooperative directors took part in mentoring sessions.

In the Area of Co-operative diffusion, around 100 groups of visitors came to experience, in situ, the Co-operative experience, and a total of 15 conferences were delivered about MONDRAGON at different national and international events.

Finally, as in previous years, a new edition of Forum 400 was organised for corporate directors, which was attended by 398 people, and a new edition of of the Aranzazu Forum, aimed at personnel managers, took place with the participation of 110 attendees.
Economic and financial summary
This chapter offers a view of the MONDRAGON Corporation economic and financial situation and its evolution in the last financial year. It should be mentioned that, while some companies apply the International Accounting Standards, most co-operatives have elaborated their reports according to the Spanish Accounting Plan.

This information refers to the consolidated balance sheet of all the corporation existing business. It also refers to the added value generated by them during the last two years after purging internal balances and movements.

**Balance evolution**
The balance of MONDRAGON to date 12.31.2010 was 33,099 million Euros, after registering a slight -235 million euros variation, 0.7% less in percentage terms.

It can be observed that, from the three big areas in the corporation, Industry is the only area which has increased its balance. Assets, after settlement, have increased in 424 million euros.

The most remarkable aspects in each balancing item to date 12.31.2010 are:

**Fixed Assets**
By the end of 2010 the fixed financial assets were 7,318 million euros after a capital reduction of 273 million euros (3.6%) during the year.

Investments during this fiscal year have been made mainly by the Industrial Area, a total of 377 million euros in 2010 despite low internal demand. The Retail area has registered dis-inversions in net terms due to the sale of some premises which it continues using.

as rent. Total repayments during the last fiscal year reach €582m, 2.3% less than in the previous year.

**Current assets**
Current assets represent the biggest current resources (25,781 million euros), although in 2010 there has only been a slight increase of €38m, 0.1% in relative terms.

The evolution of this item has been different regarding the different areas:

- The Finance and Retail areas have experienced downturns of 78 and €241m each, while in the Industrial area, this item has increased by 373 million euros, both in stocks and debit balance.

**Net Worth**
By the end of last fiscal year Mondragon net worth rose to €4,287m without including the amount of external partners, who are also part of the business net worth where they take part. Of this net worth, €2,299m belonged to shared capital and €1,988m to Reserves.

**External Partners**
During the last years the Mondragon Corporation has combined its internal growth with the settlement of new companies in the domestic and international market in collaboration with other partners.

The total amount of these interests rose up to 181 million euros to date 12.31.2010 and it is mainly located in stockholding companies in the co-operatives and the retail area.

**Non-current liabilities**
The amount of long-term finance from third parties used by the co-operatives and investee companies has remained stable in the last fiscal year with only a variation of €13m (0.1%), reaching the amount of €11,824m.

There has been a remarkable increase in the Financial area due to long-term savings and in the Retail area there has been a debt reduction.

This evolution has increased the circulating capital available in MONDRAGON to €281m in relation to 2009 by rising up to €8,974m.

**Current liabilities**
This balance sheet item has suffered a drop of €243m in 2010, -1.4% less in relative terms.

This contraction has been due to the increase of long-term savings in the Finance area, which has acted to the detriment of short-term and savings at sight, originating a drop of €492m in this item.

**Evolution of the added value**
As an addition to the Balance Sheet evolution of Mondragon we present the following chart showing the composition of its financial statements during the last two years, structured according to the format of the Added Value retail.

The total value added generated by MONDRAGON in 2010 has been quantified at €3,741m, with a contraction of 5.6% over the figure recorded the previous year, attributed mainly to the Finance area, where prevailing low interest rates during the last year reduced their level of income and net interest margin, affecting its value.

The largest contributor to the total value added has come from the Industrial area (€1,802m, 48% of total), followed by the Retail Area (38%), corresponding to 14% in the Finance area.

Personnel expenses (€2,389m) virtually repeat the previous year’s figure, with a 5% increase in the Industry area, consistent with the increased activity and the generation of employment, mainly because of the thrust of external demand. While the other two areas, which are more oriented to the domestic market, have
recorded reductions in staff costs, due to still finding itself in the processes of internal adjustment.

For its part, Financial Expenses have continued to decline, falling by €196m compared to 2009 (-32%). Most of the cuts have come from the lower interest paid by Caja Laboral to savers, which are in line with the fall of the Euribor to its lowest historical levels. To this it must be added that, although it was on a smaller scale, the other two areas have registered declines in financial expenses over those incurred in 2009.

The amount of depreciation calculated by MONDRAGON in 2010 was €582m, with a moderate 2.3% retreat. The Industrial area is the one that has accounted for a higher depreciation (€316m, 54% of total), followed by the Retail area (€241m, 41% of the total).

After the subtraction of all costs are identified, it finishes with the Operating results. This amount stood at €346M in 2010. This is an estimated figure in view of the context of the recession of the Spanish economy in the past year, which has seen a burden for businesses that allocate their products and services primarily to the domestic market.

The amounts allocated to endowments, provisions and taxes have been lower than in 2009. Added to the results outside the usual business themselves, they have been quantified at €168,000,000.

Following these movements, the net results for the year has been estimated at €178m, almost three times the amount achieved in 2009, in an exercise in which the current difficult circumstances were overcome, and which produced better results than one would have expected at the beginning.

**ADDED VALUE GENERATED BY MONDRAGON CORPORATION**
